DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 16-20, drawn to an apparatus for drainage of fluid, air and contaminants from a mammalian thoracic cavity, classified in class 604, subclass 540.
- II. Claims 9-15, drawn to a method of draining fluid, air and contaminants from a mammalian thoracic cavity, classified in class 604, subclass 541.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the draining of fluid, air and contaminants can be accomplished via irrigation of the cavity using an alternate device such as a simple flexible tube lacking control rods or actuators operatively connected to a suction source.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
